according to District officials and data released Wednesday by the state Department of Education.

The data from the second year, computer-based tests administered to students in grades three through eight, and grade 11 show progress in

Notable gains were made among English learners. In 2015, 46 percent of English learners who were reclassified as fluent English proficient met or exceeded English language arts/literacy standards. In 2016, that number rose to 51 percent.

The District will use the test results to explore ways to continue fostering academic growth and achievement.
